### Electronic Descaler Water Conditioner Hard Water Softener Model: F-1029

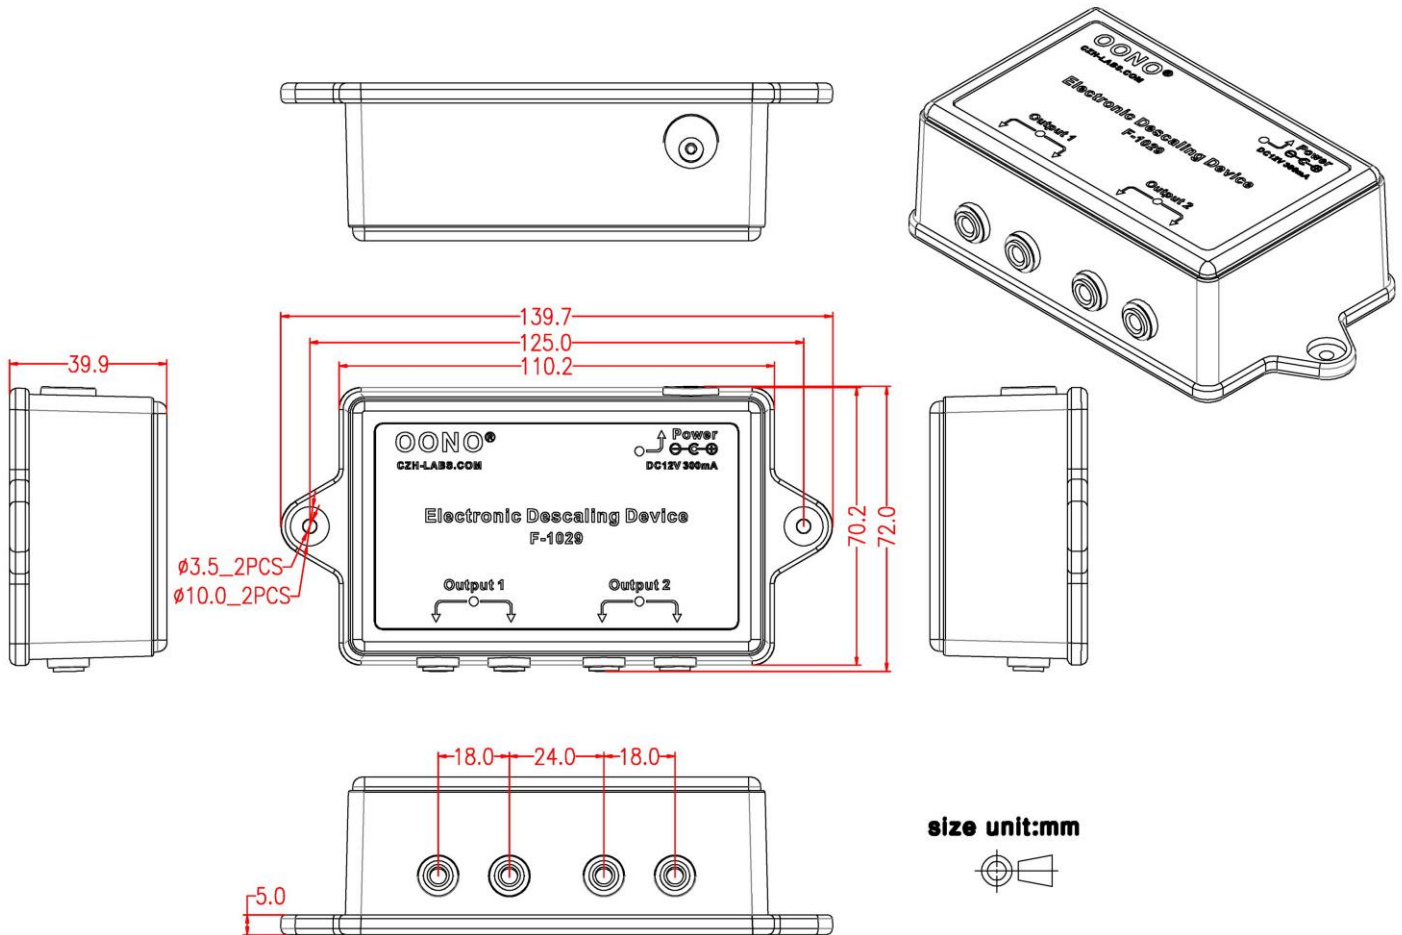

## Features:

- Very convenient installation, no need to modify the existing pipeline. Maintenance free.
- Helps prevent build-up of lime scale and dissolve existing deposits. Prevents lime scale build-up. Reduces existing limescale. Showers, taps, etc. easier to clean. Intelligent electromagnetic pulse wave, chemical-free and salt-free.
- Support for diameter 0.5" to 1.6" metal(except iron) or plastic water pipes.
- Solid state electronics and twin coils design. ABS casing. 12V DC mains adaptor, cable length 5 feet.
- Packing list:
  - 1x Electronic descaling device.
  - 2x Induction coils.
  - 1x 12VDC mains adaptor.
  - 2x Wall fixing plugs.
  - 2x Fixing screws.
  - 2x Screw protection caps.
  - 4x Cable ties.

**NOTE: the place where the wires are wound can't use iron pipe, otherwise the effect of the product will be weakened. But the place outside the winding of the wire can be an iron pip**

## Dimensions:

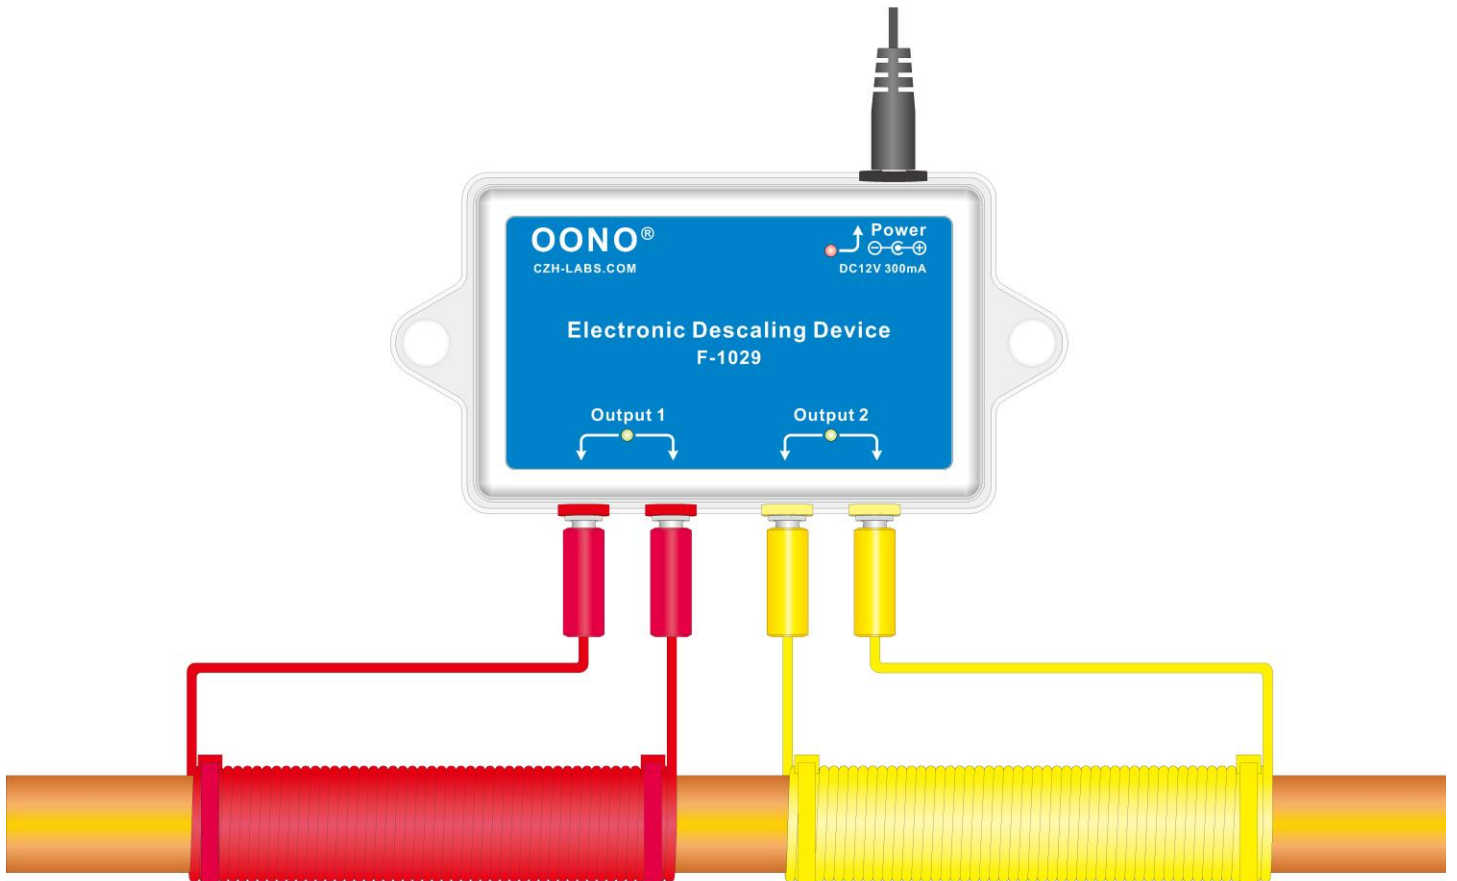

- **Installation:**

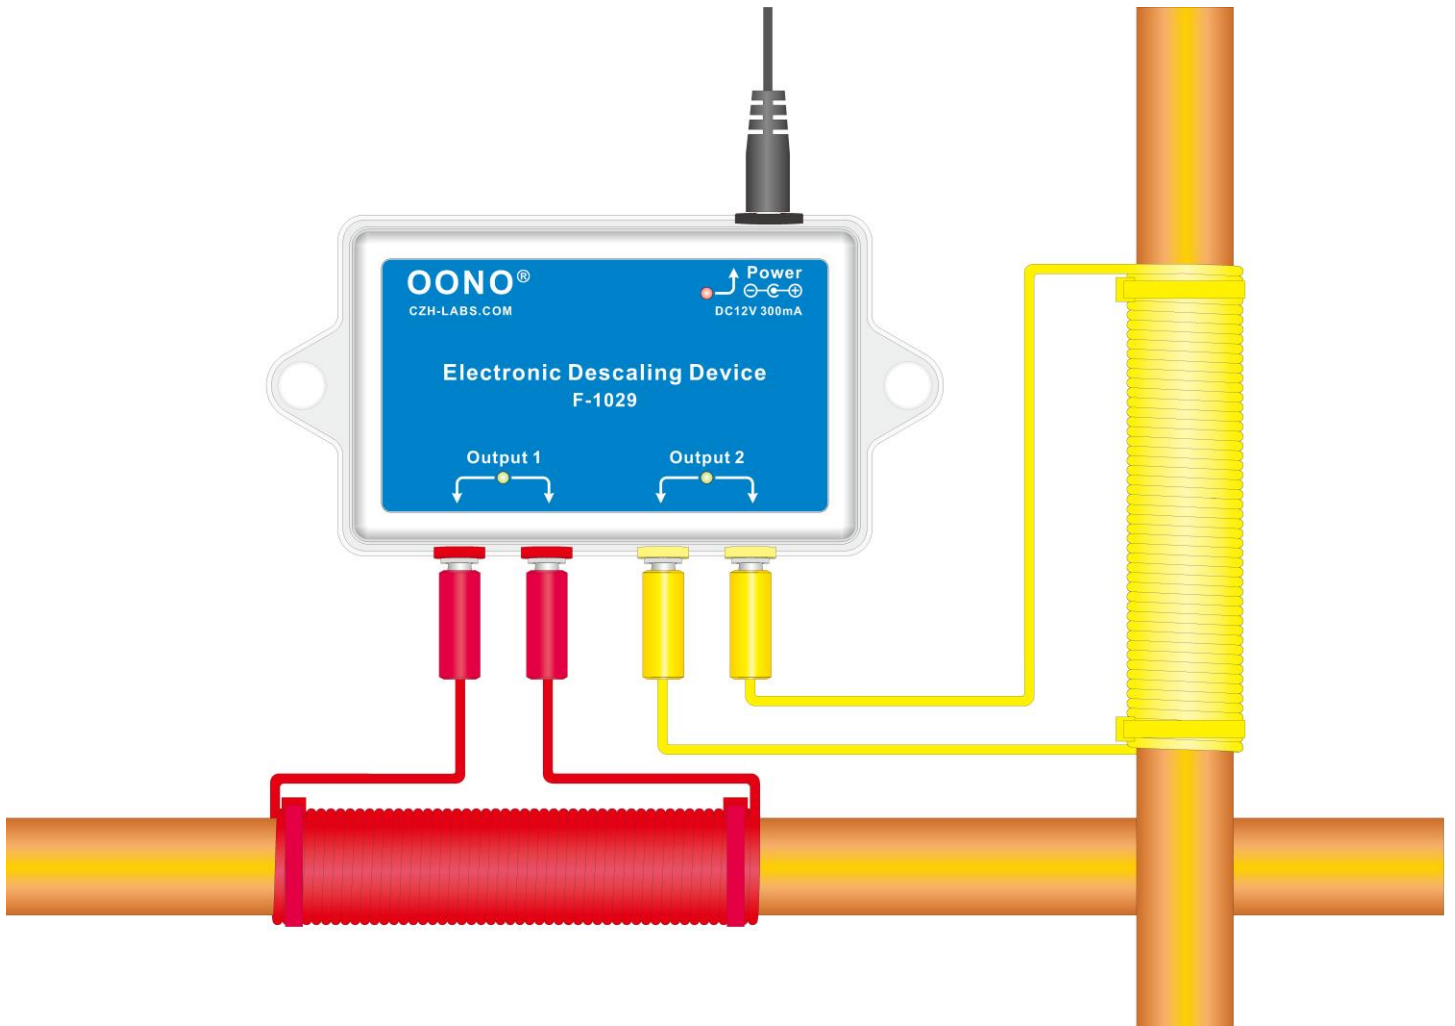

Wind the coil onto the water pipe. Support for diameter 0.5" to 1.6" metal(except iron) or plastic water pipes. Support installation to one water pipe or two independent water pipes.

Each coil is wound in parallel with **40 to 60 turns**, and the two ends are fixed and tied with rolling cable ties. Based on our electronic design technology, you do not need to care about the direction of water flow and the direction of coil winding. But for the first method of use, please ensure that the winding directions of the two coils are the same, and the distance between the two coils should be greater than 1 inches / 25mm.

1, For one water pipe.

**2, For two independent water pipes.**

Support wall installation, before installation, you need to drill two 6mm~7mm hole in the wall, and then insert the nylon wall plug. Of course, you can also place it directly on a platform without fixing it with screws. You can also use 3M double-sided tape to stick to the wall (our packaging does not include double-sided tape).
